SOLUTIONS INC.

Concrete Grinding & Polishing

**providing you with the best possible finish for
the future of your concrete floor**

**Dull grey floors are transformed into
brilliant, low maintenance & durable floors**

- most durable
- amazing appearance
- dust free
- hardens floor
- restores old weathered & worn concrete to “better than original” condition
- a wide variety of colours available
- environmentally friendly
- choice of small to large aggregate exposure, determined by the depth of the grind
- choice of level of sheen
- choice of colour of concrete

**Polished concrete is exceptionally
resistant to: wear, dusting, markings,
water, abrasion and heat**

**We also offer solutions for flaking
concrete and do crack repair
and slab jacking.**

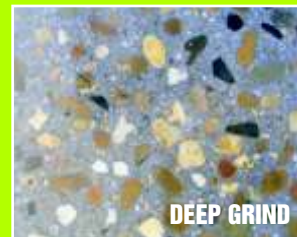

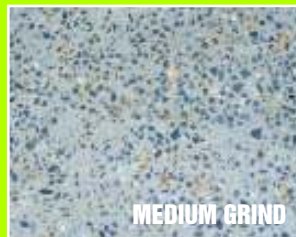

Advantages of Polished Concrete Floors

- Dense, polished surface helps protect against absorption of oil and other contaminants
- Durable and environmentally friendly
- 40% more abrasion resistant than unfinished concrete
- 20% increase in impact resistance than unfinished concrete.
- 30% increase in ambient light reflection from unfinished concrete
- Flatter, more level surface
- Easily add colour to existing concrete during the process
- Removes top layer to expose new concrete
- One time application with minimal maintenance.
- Lower maintenance costs with less wear on cleaning equipment and consumables.

Grind Type

There are different types of grinds available. By removing only a small amount of concrete we can achieve a light grind where only a small amount of aggregate shows. When we grind deeper into the concrete we can achieve a deeper grind where more of the aggregate is exposed.

Colours Available

A variety of dye colours are available so you can choose the colour that will be the most attractive within your space or will best complement the surrounding environment.
